Precision™ Ammonia can be used across a wide range of application processes, predominantly pre plant, at planting, side dress application and water run irrigation. Farmers can encourage strong establishment in pre-plant applications and in favourable conditions, the product can be applied below the top layer of soil, so that it can be used by the crop at a later stage of growth.

The 3:1 mix of hydrogen and nitrogen gases is then compressed and fed to the ammonia converters where, in the presence of an iron catalyst, the nitrogen and hydrogen combine to form ammonia. The gas from the ammonia converters is then refrigerated to -25°C, liquefying the ammonia which is separated from the gas.
