Statistical mechanics is the theory underlying condensed matter physics. This book outlines the theory in a simple and progressive way, at a level suitable for undergraduates. New to this edition are three chapters on phase transitions, which is now included in undergraduate courses. There are plenty of problems at the end of each chapter, and brief model answers are provided for odd-numbered problems.

"Traumatic or adverse experiences are pervasive among school-aged children and youth. These experiences undermine students' ability to learn, form relationships, and manage their feelings and behaviour. Meanwhile, educators and school-based professionals often remain unaware of the complex needs of their students or how to meet them within the hours of the typical school day, all while possibly dealing with their own stressors. Supporting and Educating Traumatized Students: A Guide for School-Based Professionals provides a practically oriented tool for understanding and assisting students with a history of trauma. Designed specifically for professionals in mental health and education settings, this volume combines content and expertise from practitioners, researchers, and other experts with backgrounds in education, school psychology, school social work, school administration, resilience, school policy, and trauma. The book provides a thorough background on current research in trauma and its impact on school functioning; administrative and policy considerations; and a broad set of practical and implementable strategies and resources for adapting and differentiating instruction, modifying the classroom and school environments, and building competency for students and staff impacted by trauma. Rather than provide complex treatment protocols, the chapters in this book offer simple techniques and strategies designed for all types of educational environments within the context of multiple potential sources of trauma. Supporting and Educating Traumatized Students is an essential resource for classroom teachers, administrators, and school-based professionals, as well as courses that address crisis, trauma, and education across a broad spectrum of specializations."--

Make learning lots of fun with this book packed with puzzles to help children develop.

The Handbook of Lipids in Human Nutrition is a concise reference for professionals and students interested in the role of lipids in nutrition. Over 100 tables and illustrations provide quick access to the most current data available.

Reteaching Workbook

By definition, winning means that you competed and you came out ahead. Human nature requires us to compete in order to survive. Therefore, winning and survival have the element of success in common. To ascend to a winning position, you need a goal, a desire to achieve it, and the qualities of discipline, perseverance and action to attain it. Having your goal and setting yourself up to achieve your goal is the first step in the process. You adjust your mindset and begin to plan diligently. Goals may be as different as DNA, but methodologies have much in common. Furthermore, your plans and expectations will need adjustments as you go along. That is why the knowledge shared by the CelebrityExperts(r) in this book will be of importance to you. The advice and suggestions of these CelebrityExperts(r) are based on their experiences - both their accomplishments and their shipwrecks. The knowledge they share will allow you to make plans that can propel you in the right direction. That is the function of a mentor - to guide you where you are going and to advise what to avoid. If you wish to develop The Winning Way to your goals, read on... You will never win if you never begin. Helen Row

Offers a collection of true facts about animals, food, science, pop culture, outer space, geography, and weather.

In the B Book, the youngest child will be entertained by a hilarious build-up of words beginning with the letter B. It's an ideal introduction to the realisation that letters represent sounds, and end with a bang Ages 3+

Definitive, broadly representative anthology of poets born after 1960
