For millennia, people have universally engaged in ecstatic experience as an essential element in ritual practice, spiritual belief and cultural identification. This volume offers the first systematic investigation of its myriad roles and manifestations in the ancient Mediterranean and Near East. The twenty-nine contributors represent a broad range of scholarly disciplines, seeking answers to fundamental questions regarding the patterns and commonalities of this vital aspect of the past. How was the experience construed and by what means was it achieved? Who was involved? Where and when were rites carried out? How was it reflected in pictorial arts and written records? What was its relation to other components of the sociocultural compact? In proposing responses, the authors draw upon a wealth of original research in many fields, generating new perspectives and thought-provoking, often surprising, conclusions. With their abundant cross-cultural and cross-temporal references, the

chapters mutually enrich each other and collectively deepen our understanding of ecstatic phenomena thousands of years ago. Another noteworthy feature of the book is its illustrative content, including commissioned reconstructions of ecstatic scenarios and pairings of works of Bronze Age and modern psychedelic art. Scholars, students and other readers interested in antiquity, comparative religion and the social and cognitive sciences will find much to explore in the fascinating realm of ecstatic experience in the ancient world.

Seven leading specialists present chapters devoted to key themes in Soviet and post-Soviet Russian politics. Those themes include: the personal versus the institutional in the political process; legitimacy and legitimation; and change and collapse of a mono-organisational society. While the book focuses on these major themes, individual chapters deal with wide-ranging and even unusual cases: Graeme Gill analyzes the legitimating functions of Moscow's architecture, Sheila Fitzpatrick uses the archives to draw a picture of Stalin 'the boss' dealing with his closest colleagues,

Eugene Huskey provides a detailed description of post-Soviet Russian pantouflage, and Archie Brown and Peter Reddaway present their different takes on Gorbachev and the Soviet collapse. Stephen Fortescue provides an overview of policy-making processes from Lenin and Putin, and Leslie Holmes updates the concept of goal-rational legitimacy.

The complete works of one of England's greatest Edwardian writers Saki is perhaps the most graceful spokesman for England's 'Golden Afternoon' - the slow and peaceful years before the First World War. Although, like so many of his generation, he died tragically young, in action on the Western Front, his reputation as a writer continued to grow long after his death. His work is humorous, satiric, supernatural, and macabre, highly individual, full of eccentric wit and unconventional situations. With his great gift as a social satirist of his contemporary upper-class Edwardian world, Saki is one of the few undisputed English masters of the short story and one of the great writers of a bygone era. For more than seventy years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,700 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and disciplines. for beginners to the field of information security, written in a way that makes it easy for them to understand the detailed content of the book. The book offers a practical and simple view of the security practices while still offering somewhat technical and detailed information relating to security. It helps the reader build a strong foundation of information, allowing them to move forward from the book with a larger knowledge base. Security is a constantly growing concern that everyone must deal with. Whether it's an average computer user or a highly skilled computer user, they are always confronted with different security risks. These risks range in danger and should always be dealt with accordingly. Unfortunately, not everyone is aware of the dangers or how to prevent them and this is where most of the issues arise in information technology (IT). When computer users do not take security into account many issues can arise from that like system compromises or loss of data and information. This is an obvious issue that is present with all computer users. This book is intended to educate the average and experienced user of what kinds of different security practices and standards exist. It will also cover how to manage security software and updates in order to be as protected as possible from all of the threats that they face.

The student always plays the original melody which is often repeated in a different register allowing for the playing of complete melodic phrases with the thumb. A feature of these arrangements is the early and frequent use of the second and third positions, and to a lesser extent, positions four to five; this is done for essentially musical reasons and teachers are advised to follow the suggested left hand fingering. Right hand fingerings are given to show whether a phrase should begin with the index or middle finger or the thumb.

Systematic, practical, and accessible, this is the first book to focus on finding the most defensible design for a particular research question. Thoughtful guidelines are provided for weighing the advantages and disadvantages of various methods, including qualitative, quantitative, and mixed methods designs. The book can be read sequentially or readers can dip into chapters on specific stages of research (basic design choices, selecting and sampling participants, addressing ethical issues) or data collection methods (surveys, interviews, experiments, observations, archival studies, and combined methods). Many chapter headings and subheadings are written as questions, helping readers quickly find the answers they need to make informed choices that will affect the
