An RF modulator (or radio frequency modulator) is a device that takes a baseband input signal and outputs a radio frequency-modulated signal. This is often a preliminary step in transmitting signals, either across open air via an antenna or transmission to another device such as a television.

Amazon.com: Radio Shack RF Modulator... 15-1214: Electronics

This RF Modulator converts the video and stereo audio from any A/V component, and most video game decks, into a coaxial cable output. All you do is connect your A/V component to the modulator's input jacks, then connect the modulator to your TV's antenna/cable input and select channel 3 or 4 operation.
