The impact factor of a journal is calculated by dividing the number of current year citations to the source items published in that journal during the previous two years. It is denoted as a ratio between citations and recent citable items published. You can either refer to the Journal Citation Reports (JCR) or the Scopus® database to find the impact factor of the journal.

Impact Factor and CiteScore on their
About Page. However, you have to be
careful because predatory journals
post fake Impact Factors too.

How can I find the impact factor and
rank of a journal?

The impact factor or journal impact
factor of an academic journal is a
scientometric index that reflects the
yearly average number of citations
that articles published in the last two
years in a given journal received. It is
frequently used as a proxy for the
relative importance of a journal within

its field; journals with higher impact factors are often deemed to be more important than those with lower ones.

Impact factor - Wikipedia

The following is a partial list of scientific journals. There are thousands of scientific journals in publication, and many more have been published at various points in the past. The list given here is far from exhaustive, only containing some of the most influential, currently publishing journals in each field.

List of scientific journals - Wikipedia

The Journal Impact Factor should be used with informed peer review. In the case of academic evaluation for tenure, it is sometimes inappropriate to use the impact of the source journal to estimate the expected
